

How to:

Hobbit Wreaths

Supplies you will need.

- Wicker wreath
- Paint
- Brushes
- Clay tools
- Foam board background
- Hot glue gun
- Decorations of your choosing!

Wreath Door

Cut the foam background to fit the circumference of your wreath.

Let Paint Dry

Once you are satisfied with your painted background. Let it sit for 5 to 10 minutes. You can use this time to organize your wreath accessories.

~ Create Wood Panels ~

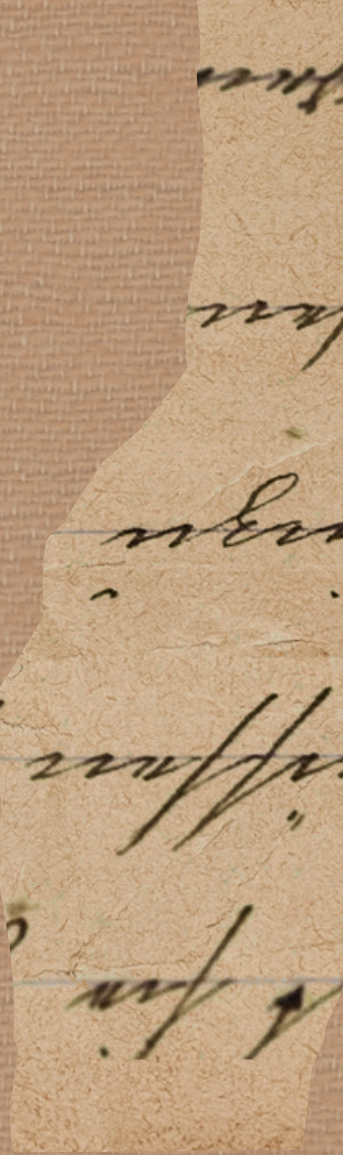

Take a sharp and pointy tool and drag it down to make parallel straight lines across your circle. We have clay tools but you can achieve the same effect with the back of a pen cap.

~ Add Texture ~

To create the look of wood grain you are going to take the tool that looks like a loop (or a paper clip) and drag it down a few times in between the lines you just created.

~ Add Texture Pt.2 ~

These lines do not need to be straight and actually will look more natural if they are a little wobbly. You can take the tool that looks like a little rake and make some scratches to "weather" the door as seen above.

Painting notches

Do not be afraid of ripping the foam!
If you rip the foam board, it's an opportunity to add some watered down black paint and create a little notch in the door.

Attach Wreath

Using your hot glue gun, attach your wreath.

~ Add Decoration ~

The next step is completely up to you! We used decorative flowers, mushrooms, beads, and moss. Start adding your art supplies to your wreath. The glue guns will help but many things like the mushrooms and the flowers can be weaved into the wreath itself.
